SoftNAV Catheter

Technowood SoftNAV Catheter Concept:
Hydrophilic coating is effective for severe tortuous anatomy and makes coronary engagement easier.

Case Report:

1. We use Technowood hydrophilic coated SoftNAV Catheter for patients over eighty years old or dialysis patients who have severe arteriosclerosis.
2. Technowood hydrophilic coated SoftNAV Catheter is an ideal choice for a challenging case with arteriosclerosis; providing smooth navigation and easy coronary engagement.

Katsunori Wakayama, M.D.
Department of Cardiology
Clinical Investigator

Conclusion:

Technowood SoftNAV catheter is effective for trackability and challenging cases with arteriosclerosis because of hydrophilic coating. Furthermore, blood vessel trauma is less likely due to the hydrophilic coating.

Technowood SoftNAV Catheter is an ideal choice when difficulties are expected due to severe tortuosity.
